

AutoReach AI

Complete Feature Specification · v2.0

NEW Entry-level features, ready for v1

PRO Paid-tier differentiators

POWER Enterprise / v2 features

AI & INTELLIGENCE

NEW

Tone selector

Let users pick Formal, Friendly, Assertive, or Casual — AI adapts the draft's language accordingly.

NEW

Multi-language drafting

Detect the original email's language and auto-draft the follow-up in the same language.

NEW

Persona memory

AI learns each user's writing style over time and matches their voice in future drafts.

PRO

Intent classification

Auto-tag each thread: Job app, Sales, Networking, Collab, Support — with tailored follow-up templates per tag.

PRO

Reply probability score

Predict how likely a follow-up is to get a response based on subject line, send time, and historical data.

PRO

A/B draft variants

Generate two different follow-up angles so the user can pick the one that feels right.

EMAIL & OUTREACH MANAGEMENT

NEW

Custom follow-up delay

Let users set their own wait window — 3, 7, or 14 days — instead of a fixed 7-day rule.

NEW

Multi-step sequences

Define a chain: follow-up #1 at day 7, follow-up #2 at day 14, then auto-archive if still no reply.

NEW

Smart send time

Schedule follow-ups to land on Tuesday–Thursday mornings based on recipient timezone.

PRO

Bulk thread import

Upload a CSV of sent emails to instantly track multiple threads at once without manual entry.

PRO

Blacklist & exclusions

Mark specific domains or recipients to never auto-follow-up (e.g. internal team emails).

NEW

CTA injector

Automatically append a Calendly link or custom CTA to every outgoing follow-up.

DASHBOARD & UX

NEW Push notifications Ping users on mobile or browser when a draft is ready or when a tracked thread gets a reply.	NEW Thread search & filter Search across all tracked threads by recipient, date range, intent tag, or status.
POWER Kanban board view Visualize threads as cards across pipeline stages: Sent → Waiting → Draft Ready → Replied → Closed.	NEW Edit history Log every change a user makes to an AI draft so they can revert to the original suggestion anytime.
POWER Mobile companion app A lightweight iOS/Android app to approve, edit, and send drafts from anywhere.	

ANALYTICS & REPORTING

NEW Reply rate trends Weekly graph showing how follow-up success rates change over time for each intent category.	PRO PDF / CSV export Export a full activity report of all tracked threads, outcomes, and AI usage for a selected period.
POWER Team analytics For org plans — compare follow-up performance across teammates to identify top-performing templates.	NEW Token usage tracker Show users exactly how many AI tokens their account has consumed and the cost breakdown per draft.

INTEGRATIONS

PRO Gmail & Outlook native Browser extension to track any outgoing email directly from Gmail or Outlook with one click.	POWER CRM sync Push tracked threads and reply outcomes directly into HubSpot, Salesforce, or Notion.
POWER Webhook & Zapier support Fire events (thread replied, draft generated) to any external workflow via webhook or Zapier trigger.	POWER Desktop app Native Windows & macOS app with system tray support — approve follow-ups without opening a browser.

SECURITY & ACCOUNT

NEW

BYOK (bring your own key)

Let power users plug in their own OpenAI API key for unlimited usage billed directly to them.

PRO

Team workspaces

Shared dashboard for small teams with role-based access: Admin, Editor, Viewer.

NEW

Email encryption at rest

Encrypt all stored email body text in the database so raw content is never exposed.

PRO

Auto data purge

Let users set a retention window (30/60/90 days) after which closed threads are permanently deleted.
